

## **Discounted Benchmarking for SGNA Members**

Olympus has the most timely and comprehensive GI-specific benchmarks in the country based on more than 1.4 million procedures spanning four years of detailed trending data. With the knowledge these benchmarks provide, our customers are able to compare themselves with like facilities, pinpoint areas for improvement, and minimize the time and resources spent on data collection. The program also gathers key operational profile data that enables our customers to understand their results.

To ensure confidentiality and security, customers are given unique logins and passwords for our web site to enter their facility data. Each quarter, customers are sent facility-specific, customized reports that highlight their data side by side with the overall benchmarks. The quarterly reports vary in size but are typically 50-75 pages in length and include various charts and graphs to illustrate the findings.

**Currently, a facility can sign up for a 2-year subscription for \$1,500. As a special offer for SGNA, we will discount the regular price by \$250 for each member. The discounted offer is limited to (2) members per facility.**

The special discounted enrollment form is available at <http://www.sgna.org/resources/IndustryDiscounts.cfm>.
